Instructions

The SAP Ninja nugget for Splunk delivers dozens of data dictionary objects, which would be tedious to activate manually. The following screenshots show how to perform a mass activation of these objects. Start transaction *SA38* and execute program *RADMASGO*.

Click on the *Direct Objects* button at the selection screen.

Enter **ZSAPNINJA*** as the selection for *Domains*, *Data Elements* and *Tables*. Press the *Execute* button.

You will return to the selection screen. Press the *Execute* button and all the SAP Ninja DDIC objects will be activated in one swoop.
